

POWER MAX™ cutting wheels feature a new formulation with an optimal percentage of high-quality **zirconia** grain. Experience the advantage of premium cutting capacity, which allows you to perform fast, clean and precise cuts across a wide range of materials - such as **carbon steel, alloy steel and stainless steel**. As with all of SAIT Abrasives' inventions, **POWER MAX** wheels are subjected to strict quality controls, ensuring a high standard of both reliability and product safety.

POWER MAX 9.3 is our latest fibre disc, utilising **100%** new generation **ceramic abrasive**. The newest evolution of SAIT's line of top-filled ceramic fibre discs with active **cooling additives**, it rightfully claims a place in this high-performance line. The new **POWER MAX 9.3** fibre discs are designed to achieve extremely high levels of removal and finishing. The continuous renewal of the ceramic grain allows for incredibly high performance and a cold cut - even with heavy-duty processes. **POWER MAX 9.3** is particularly suitable for weld removal, deburring and heavy machining operations on **stainless steel, alloy steels** and all **heat-sensitive metals**.
